

## **Fathom Tutorial**

This is a discovery lesson designed to familiarize you with the Fathom software program that we will be using throughout this year. The tutorial was written for the original version of Fathom. Since we are using an updated version, some instructions may not be exactly the same. If you encounter this, experiment a little and try a similar command. You can not hurt this program.

Open the Fathom program by using the shortcut on the desktop and then minimize the program.

Next go to My Computer. Go to the G:drive, EHS Courses, Intro to Stats, Fathom Tutorial, and finally Fathom Tutorial part 1.

Select "The Basics." Then select "Tool Bar." Work through the tutorial. You will switch back and forth between the tutorial and the Fathom program.

If you have a question, ask a colleague for help.

To complete this lab, you need to turn in a one-page printout that contains the 5 items listed on the reverse side of these instructions.

**Assignment is due at the end of the hour.**
